***Withdrawn Objection/Rejection***

2. The objection to the specification at page 15 line 7 is withdrawn in light of Applicant's amendment submitted on 09/08/2009. The objection of Claims 13-16 due to minor informalities is withdrawn in light of Applicant's amendment submitted on 09/08/2009.

3. The rejection of claims 1 and 3-17 under 35 U.S.C 112, second paragraph, is withdrawn in light of Applicant's amendment.

4. The rejection of claims 1 and 3-17 over Lampe-Onnerud and Fierro is withdrawn in view of Applicant's amendment and remark.

***STATEMENT OF REASONS FOR ALLOWANCE***

5. The following is an examiner's statement of reasons for allowance: Claims 1 and 3-17 are allowed as amended.

Art Unit: 1796

6. The following is an examiner's statement of reasons for allowance:

7. 2002/0110518 A1, and US Pub. 2002/0071990 alone or in combination failed to teach or suggest that the average transition metal composition of cobalt, manganese, and nickel in the outer bulk (shell) differ by at least 10% in stoichiometry from the average transition metal composition of the inner bulk (core) as defined in independent Claims 1 and 6.

8. **JP 11-092119** discloses a lithium manganese oxide composite powder consists of fine particles consist of oxide having composition  $\text{LiMO}_2$  ( $M = \text{Co}, \text{Ni}, \text{Fe}, \text{Cr}, \text{TiV}$  etc) adhered on the surface of lithium manganese oxide particles powder (See Abstract).

9. **US Pub. 2002/0110518 A1** discloses a lithium transition metal composite oxide composition composed of a transition metal containing at least one selected from the group consisting of Co, Ni and Mn as a main composition element. The composition of a surface layer of each particle of the lithium transition metal composite oxide is made different from that of an inside of each particle wherein the ratio of lithium in the composition of the surface layer of each particle is made greater than that in the average composition of each particle (See Abstract).

10. **US Pub. 2002/0071990 A1** discloses a positive active material includes a core and a surface-treatment layer on the core. The core includes at least one lithiated compound and the surface-treatment layer includes at least one coating material selected from the group consisting of coating element included-hydroxides, oxyhydroxides, oxycarbonates, hydroxycarbonates and any mixture thereof (See Abstract).

11. The new prior art of record to JP 11-092119, US Pub. 2002/0110518 A1, and US Pub. 2002/0071990 alone or in combination either teaches or fairly suggestive of applicants composition of matter comprising the combination of components and the structure. Therefore, claims 1 and 3-17 are allowed over the prior arts of record.

12. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
